01 · PROBLEM

Prediction products are built for traders. They leave out the culture and creators that drive attention.

02 · SOLUTION

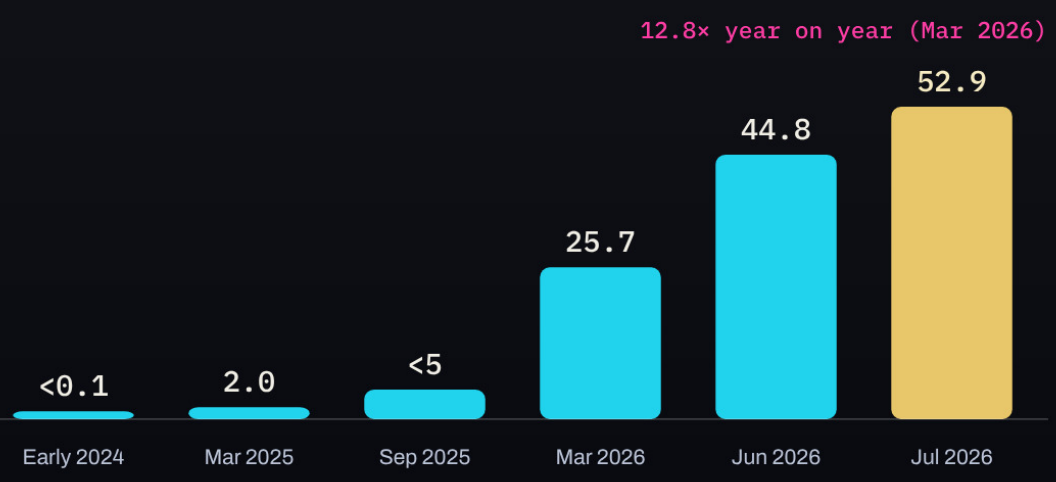

Turn that attention into markets with fair economics for the people who create it.

03 · WEDGE

Conviction markets for entertainment and creator culture. Every viral moment becomes a market, not a generic binary bet.

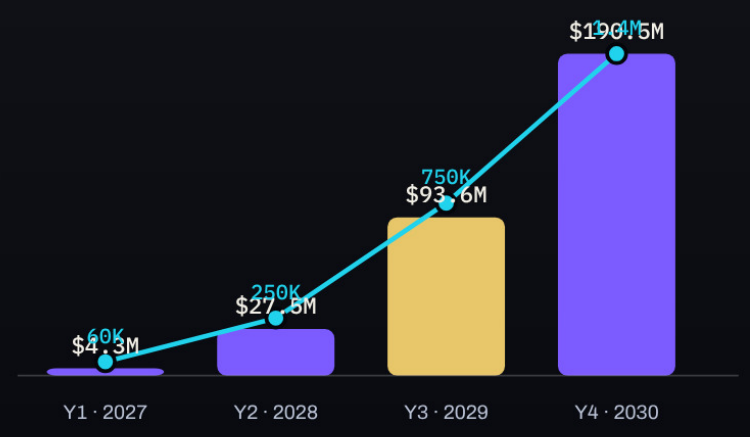

CATEGORY VOLUME · $B PER MONTH

Prediction markets, Jan 2024 to Jul 2026 · The Block, Dune, Pew, Keyrock

DOCS/MASTER_MATHS_AND_ALGORITHMS.MD · §1 – §13 · THE CODE IS THE AUTHORITY

Thirteen sections of maths. Pull the levers.

Every control on this page is wired to the constants MAD Gambit ships with — the 1.88% rake, GARCH clamped at 0.09–0.68, the 2–4% shield band, stake-amount staking tiers. Move a slider and the engine answers with the numbers the contracts would use. Proprietary coefficients stay server-side; the appendix at the foot prints the equations exactly as the mastersheet writes them.

Run the conviction engine | Read the equations as written

PREDICTION MARKETS · BINARY

Open prediction markets that creators spin up are binary YES/NO — the same LMSR pricing above with two outcomes, and the only place the 40% creator share of the 1.88% rake applies.

PLATFORM MARKETS · CIRO

Non-binary by design: continuous DL-LMSR plus over/under. Legs run 45–90 days and never under 30 — the minimum-maturity compliance rule. A Conviction Saga auto-relaunches the next leg and the MADConv profile compounds across legs.

TAXONOMY · FIVE TYPES, THREE OF THEM PERPETUAL

market-classifier.ts sorts every market into Progression / Saga / Z-Liar Meter / Perpetual Epiphanies / Gossip-Cop by composing the liar meter, the perp trigger and sentiment. The last three are the perpetuals families. Deterministic and heuristic — no ML.

§2 · MARKET-CLASSIFIER.TS — THE LIVE CASCADE

Feed it a headline. Watch it pick a market type.

The horizon estimate and gossip test below run the shipped regexes verbatim — type into the field and the classification moves. Liar score, perp probability and sentiment intensity are the three signals the classifier consumes, so they are sliders here. The generated title and resolution criteria are the strings the platform actually writes.

INCOMING HEADLINE

Royal feud escalates as tabloid drops decade-long affair c

HORIZON 540D · 12+ MONTHS GOSSIP TERM HIT

LIESCORE · ZLIARMETER **72**

PERP TRIGGER PROBABILITY **0.97**

Not a dial — computed by the trigger lab below and fed in here.

SENTIMENT INTENSITY **0.60**

☑ Sentiment reports dopamine potential

ZLIARELIGIBLE PERPELIGIBLE

Progression

FALLBACK · HORIZON ≤ 60D

Short structured arc — A→B→C milestones, resolves on the next one.

Saga

HORIZON > 60D

Long evolving narrative, weeks to 2yr+. Auto-relaunches follow-on legs; MADConv compounds across them.

Z-Liar Meter

LIESCORE ≥ 60 · DOPAMINE · LEGS ≤ 45D

The first perpetuals family. The meter runs continuously on a claim; each 45-day leg resolves on corroboration and the next one opens.

Gossip-Cop — CLASSIFIED

PERP RULES + GOSSIP TERM HIT

The second perpetuals family — celebrity/tabloid/hearsay. Satire engine, roast titles, Affliction/Golden Aura card evolution.

Perpetual Epiphanies

PERP P ≥ 0.6 · HORIZON ≥ 365D · !ISGOSSIP

The third perpetuals family — continuous conviction on mental models and laws of life. Files under the perp enum; no terminal date.

GENERATED PROPOSAL

Gossip Perp: is "Royal feud escalates as tabloid drops decade-long affair claim" a forever-saga? (continuous)

Continuous MAD Gossip perp — historical-pattern (GossipCop-style) tracked; positions roll while the saga stays live.

CONVICTION PRIOR **0.77** RANK SCORE **0.78**

The cascade is a priority chain, not a scorecard: the first rule that matches wins, which is why a 540-day gossip perp can never be filed as a Saga. `zliarEligible` and `perpEligible` survive as secondary tags, so a Saga can still surface a Z-Liar facet.

---

§2B · GDELT.TS — THE PERP TRIGGER, AND THE THREE FAMILIES IT FEEDS

Three perpetual families, in the order they were built.

Continuous markets are not opened by hand. `gdelt.ts` prices the probability that a storyline has

no clean terminal date. The **Z-Liar Meter** came first — a claim's truthfulness tracked continuously, in 45-day legs. **Gossip-Cop** came second, taking the same machinery to celebrity and tabloid sagas. **Perpetual Epiphanies** is the third, and is continuous in the strictest sense: mental models never resolve at all. One boolean routes between the latter two; the LieScore gate routes the first.

$$P = 1 - e^{-0.25 \cdot \text{matches} \cdot \text{themeWeight} \cdot (1 + \text{velocity})}$$

Gossip-Cop preset | Epiphanies preset

GDELT MATCHES 5

THEME WEIGHT 1.20

SCANDAL VELOCITY · EMOTION WEIGHTS 1.35

SHAME +1.8 | ANGER +1.4 | DISGUST +1.3 | FEAR +1.2 | SADNESS +1.0 | JOY -0.5

Joy carries a negative weight — a happy story is a bad perp. Shame is the strongest signal in the platform.

PERP TRIGGER P

97.1%

≥ 0.6 — perpEligible

P against matches 1–12 at the current theme weight and velocity. Saturating exponential — past eight matches, more coverage buys almost nothing.

THE FORK

gossip filter hit → gossipcop · Gossip-Cop, family two

All three families share the trigger, the LS-LMSR maker, the Shield, the optimistic oracle and the roll mechanic. What differs is the gate and the leg length — not the maths.

Z-Liar Meter

TYPE ZLIAR · FAMILY ONE

The original perpetuals family, and the only one whose subject is a *claim* rather than a storyline. LieScore runs continuously against the claim; each leg resolves on independent corroboration inside 45 days and the next leg opens on the same subject, so the meter itself never stops. LieImpact = LieScore × EconMult × ψ_agg × VolAmp carries the position between legs.

GATE
LieScore ≥ 60 & dopamine

LEG LENGTH
≤ 45d

BANDS
5

RESOLUTION
corroboration

Signals: linguistic deception 0.35, contextual contradiction 0.30, sentiment shift 0.20, vocal anomaly 0.15 — see the live meter on 02 Mechanics.

Gossip-Cop

TYPE GOSSIPCOP · FAMILY TWO · V1.2

Celebrity, tabloid and hearsay sagas with no clean binary end — positions roll while the circus stays live. Satirical layer on top of the same maths: roast titles, ChaosMeter, Z-Liar "TOTAL FABRICATION" banners, and card evolution into Affliction for losers or Golden Aura for winners.

GATE
perpEligible & ≥365d & isGossip

Y2 VOLUME TARGET
≥ 25%

AVG HOLD
> 30d

SHIELD OPT-IN
≥ 40%

MADGossipPerp.sol adds narrative-state and written-off flags on top of MADLmsrMarket.sol. New off-chain service: satire-engine. API POST /api/v1/gossip/{classify, open, roll, resolve, shield, roast}.

Perpetual Epiphanies

PERP ENUM · FAMILY THREE · V1.1

Continuous conviction on mental models, laws of life, adages and urban legends. No celebrity filter, no fixed expiry — positions roll on the *cultural persistence* of the model itself. Bayesian belief-shift tracking is the primary signal rather than scandal velocity, which is why long-horizon Shield matters more here.

GATE
perpEligible & !isGossip

Y2 VOLUME TARGET
≥ 15%

AVG HOLD
> 45d

CROSS-CULTURAL SHARE
≥ 30%

MADEpiphanyPerp.sol adds a model-state machine and cultural-persistence mapping. New off-chain service: mental-model-catalog. API POST /api/v1/epiphany/{catalog, classify, open, roll, resolve, shield}.

THE CATALOG · LAWS THAT NEVER EXPIRE

Murphy's Law
If anything can go wrong, it will

Peter Principle
People rise to their level of incompetence

Hofstadter's Law
It always takes longer than you expect — even accounting for this law

Littlewood's Law
One-in-a-million miracles, roughly monthly

Also: Johnson's, Finagle's, and the wives'-tale set
Medical folklore and cautionary tales as continuous surfaces

CROSS-CULTURAL SET · EAST / WEST / MENA

Sai Weng Shi Ma
Chinese — misfortune may be blessing in disguise. Spawns follow-on legs by design.

Nana korobi ya oki
Japanese — fall seven times, stand up eight. Founder-resilience index.

No smoke without fire
Arabic / MENA — a claim-verification continuous index, and the one model that reads directly into Z-Liar.

Was schiefgehen kann, geht schief
German, French, Spanish and Korean parallels all map onto the same conviction surface.

The nuance worth stating: Epiphanies is the third perpetuals family but **not a sixth MarketType** — it files under the `perp` enum and is distinguished by surface, catalog and UI, so the classifier only ever needs the gossip boolean to route it. Z-Liar and Gossip-Cop each earned their own enum value because their resolution semantics differ: a Z-Liar leg closes on corroboration, and a Gossip-Cop market can close because a character was written off the show.

Sourced from MADdegen/MAD-MPP-2.23 @ main — docs/MASTER_MATHS_AND_ALGORITHMS.md, cross-checked against verify/lib/gambit-game-math.ts. Live panels are illustrative renderings of the shipped formulas; the appendix is the document's maths unaltered.
